

Caden Edam

Minneapolis, MN | 651-334-1156 | cadenedam@gmail.com | linkedin.com/in/cadenedam

EDUCATION

Purdue University

B.S. Data Science, Minor in Economics

Graduating December 2026

- Member of Triangle Fraternity (STEM Leadership Organization)
 - President (2023-2024), Philanthropy Director (2022-2023)

EXPERIENCE

Archer Aviation

Data Science Intern

San Jose, CA

Summer 2026

- Implemented user telemetry for an enterprise-grade internal Python package, enabling zero-friction metrics collection for 100+ engineers
- Leveraged Snowflake's serverless ingestion and tasks for complete end-to-end data collection, storage, and analysis at near-zero cost
- Partnered with internal tooling owners to roll the update out and adapt it to their workflows, driving adoption without added developer overhead
- Created Claude Skills automating repetitive engineering workflows saving engineers 10-20 hours a week

Purdue Aerial Robotics Team

Business Management Lead

West Lafayette, IN

2024-2025

- Directed a team of students to manage marketing, finances, and events for a 200 member organization
- Implemented a new subteam and organizational structure for grant applications, and received a record amount of funding

LeagueOS, Spectator Sports

Data Science Intern

Minneapolis, MN

Summer 2024

- Collected and tracked user interaction data through React and Typescript, ensuring accuracy and reliability
- Parsed and cleaned user data into MongoDB and PostgreSQL databases to support robust data management
- Designed interactive dashboards to visualize user activity across different time ranges

Edina Public Schools District

IT Technician

Edina, MN

Summer 2024

- Collaborated with a technical team to replace and repair networking, hardware, and A/V technology, ensuring operational efficiency within the district
- Executed district-wide overhaul projects on network and audio devices, optimizing technology infrastructure

PROJECTS

Spatial Deep Learning – Capstone Research

- Collaborated with a research professor to build a deep learning model that converts 2D human annotated maps of WW2 troop information/movement into 3D annotated spatial data for GIS software.
- Led a team of eight senior data science students, managing Jira space for communication.

UAS/UGV Medusa Project – Purdue Aerial Robotics Team (SUAS Competition)

- Received telemetry from onboard transmission, and used RabbitMQ, Django ORM, and Grafana to display real-time data on our ground computer pertaining to the UAV's flight information such as altitude, velocity, waypoint tracking, and more
- Implemented ArduPilot's SITL to allow for flight simulation through waypoints, enabling easy software testing for the UAV's navigation and flight software in Linux Ubuntu.

ABOUT ME

Technical Skills: Python, R, Java, SQL, C++, Docker, AWS, Snowflake, Claude

Web and Design: HTML/CSS, Javascript, TypeScript, React, WIX, Wordpress

Coursework: Data Mining and Machine Learning, Information Systems, Large Scale Data Analytics, Probability Theory
